WET FILM RANGE

MAG DATA GROUP’s wide selection of film consists of several lines of materials all distinguished by an exceptional level of quality.

Our warehouses boast a storage capacity of **12.000 pallet spaces**, guaranteeing a constant supply of goods.

Rolls are available in all formats used in the offset and digital printing industry, as well as in special formats and lengths, thanks to our **16 production lines** that can meet all customization needs.

We offer many films certified for **direct food contact** and **sustainable solutions** based on films of natural origin or recycled resins:

- film in **cellulose acetate**, a biodegradable and compostable material produced from wood pulp and cotton
- film made of **PLA**, a biodegradable and compostable material derived from the transformation of sugars found in corn, beet, sugar cane and other natural and renewable materials.
- film made of **PET PCR**, produced with 90 percent recycled resins and aimed at supporting a sustainable “circular” approach.

Film are then available with multiple finishes, designed to enhance the different types of products for which they are intended: **soft-velvet finishes** are popular in the fashion industry, while **metallic finishes** find a place in the cosmetics field.

Scratch-resistant finishes or those that simulate a cloth surface are ideal for publishing, while **sandy** and **rough** ones lend themselves to communication campaigns that seek a striking and original effect.

Holographic film lend themselves particularly well to the production of shoppers, stickers, figurines and game cards. Films with antimicrobial treatment are also available, equipped with certification for use in medical or educational settings.

All films intended for subsequent printing or gluing processes are subjected to **Corona treatment** on both the outer and inner sides, where the adhesive is applied.

Some of them also undergo additional treatments to impart special finishes or improve the printability of the product.

Technical specifications for each film can be found on our websites at:

www.mag-data.com and **www.ultralen.com**

For any products not listed, please contact us at:
