suitable for
bursting systems

3 diffent
finishes

HOLOGRAPHIC FILMS

Product features:

The dry holographic clear films enhance the colours and add surprising optical effects to the graphics below, with the possibility to choose between three different finishes:

Clear Rainbow adds a rainbow effect to the print, **Clear Cracked Ice** has a multi-prismatic finish reminiscent of ice, and **Clear Sparkle** also has a faceted surface that gives the print a “sparkling” effect.

These unique effects allow graphic designers to add an extremely attractive visual element to products that need to **capture attention**.

When applied to a dark-coloured print, the effect added by the transparent film becomes really intense. On a range of colours, it adds different intensities depending on the viewing point.

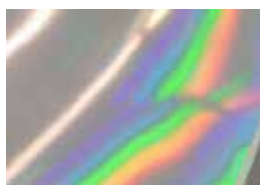

The Rainbow and Cracked Ice finishes are also available in an opaque metallic version.

Like other films, holographic lamination offers protection to printing and is resistant to water and grease.

The product is supplied on request. Please contact us for information on minimum order quantities.

Main applications:

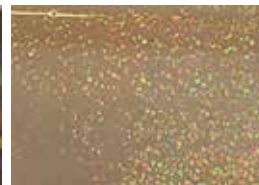

- Invitations to parties, events, weddings
- Menu for special occasions
- Brochures of innovative products
- Labels
- Shopper
- Packaging
