and anti-reflective

ANTI-SCRATCH FILM

Product features:

The **Protect X** scratch-resistant film features a matt finish treated with a special coating that makes it **resistant to scratches and abrasions**, thus preserving the quality of the finished product.

In fact, the matt film is chosen for its refined appearance. This special version offers **extra protection from handling and rubbing**, even when being handled, and is therefore particularly suitable for products that need to maintain a flawless appearance when frequently handled or consulted.

For this reason, Protect X film is particularly popular in the worlds of fashion, aesthetics, perfumery and luxury in general, both for packaging and illustrative materials.

For post lamination processing, such as gluing, screen printing and hot stamping, prior approval tests must be carried out before production.

It is available in both dry - also for digital toner printing - and wet versions.

Main applications:

- Fashion catalogue covers
- Editorial products
- Cosmetics and jewellery packaging
- Boutique shoppers
- Luxury product brochures
- Refined business cards
- Luxury packaging labels

Code	Article	Finishing	Thickness Micron	Length Meters	Core mm
