VELVETY SOFT FILM

Product features:

The **Temptation** velvety film is characterized by a matt finish and a very pleasant “soft” surface, suitable for refined and elegant creations and for those looking for a material that pleasantly stimulates both sight and touch.

Temptation is designed to make application easier than other velvety materials. The treatment that gives it the particular soft and velvety finish is in fact formulated in such a way as to reduce the “barrier” effect that can hinder hot plasification. Thanks to this feature, this film does not require the use of particularly high temperatures and is therefore not subject to degradation phenomena.

Temptation is a material particularly suitable for the most prestigious creations, such as communication materials intended for the world of luxury and the packaging of cosmetic and jewelry items.

The use of the product for processing subsequent to lamination, such as gluing, screen printing and hot stamping, is subject to the prior execution of approval tests.

The product is available in both dry - also for digital printing - and wet versions.

Main applications:

- Hard and soft book covers
- Covers of fashion, cosmetics and jewelry catalogs
- Packaging of cosmetics and jewelry
- Business cards
- Shopper of boutiques and shops

Code	Description	Finishing	Thickness Micron	Lenght Meters	Internal core mm
