

MATT ANTI-SCRATCH FILM

ultra protection
against scratches
and abrasions

"ULTRA SHIELD"

strength and
durability

available
wet & dry

extra matt
and anti-glare

Product Features:

The **Ultra Shield** protective film is part of Mag Data's line of matte, scratch-resistant films. This film features a matte finish treated with a special coating that makes it **resistant to scratches and abrasions**, thereby preserving the quality of the finished product.

The matte film is chosen for its refined aesthetic appeal: this special version offers **extra protection against handling and abrasion, even during intermediate stages of production**, and is therefore particularly suitable for products that need to maintain a flawless appearance even when handled or consulted frequently.

For this reason, **Mag Data Ultra Shield** is particularly popular in the fashion, beauty, fragrance, and luxury industries in general, both for packaging and promotional materials.

For post-lamination processes, such as gluing, screen printing, and hot stamping, it is necessary to conduct preliminary **compatibility tests** before proceeding with production.

It is available in both **dry** and **wet** versions.

Main applications:

- Fashion catalog covers
- Cosmetics and jewelry packaging
- Book covers
- Boutique shopping bags
- Luxury product brochures
- Sophisticated business cards
- High-end product labels
